PROFESSIONAL SUMMARY

Final-year B.Tech Computer Science Engineering (AI & ML) student with hands-on experience building full-stack and LLM-integrated applications end-to-end — from REST APIs and RAG pipelines to conversational Voice AI agents and deployment. Oracle Certified in Agentic AI Foundations. Independently discovered and fixed a production credential leak, resolved deployment-blocking bugs, built a full-stack platform (React Native, Node.js, PostgreSQL) deployed on Render, configured a conversational Voice AI agent for a real-world use case using Voiceflow, and built a vector database with a RAG pipeline and a network traffic classification tool in Python. Strong foundation in Data Structures & Algorithms with consistent LeetCode practice. CGPA: 8.67.

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, TypeScript, SQL

Data Structures & Algorithms: Two Pointers, Sliding Window, Prefix Sum, Kadane's Algorithm, Arrays

Backend & Databases: Node.js, Express.js, Flask, REST APIs, PostgreSQL, MySQL, JWT Authentication

Frontend & Mobile: React, React Native, HTML5, CSS3, Cross-Platform Development

AI / Machine Learning: LLM API Integration (Claude API), Agentic AI, AI Agents, Prompt Engineering, Retrieval-Augmented Generation (RAG), Voice AI, Conversational AI, Conversation Design, Voiceflow, Machine Learning, Deep Learning, Computer Vision, NLP

Tools & Practices: Git, GitHub, API Integration, Unit Testing, Cloud Deployment (Render)

CERTIFICATIONS

Oracle Certified Foundations Associate — Agentic AI | Oracle University, Sept 2026 | Verify credential

PROJECTS

Insta Insights — Full-Stack Mobile Analytics Platform *React Native, Node.js/Express, PostgreSQL, TypeScript*

- Built a full-stack license-management app using React Native, Node.js/Express, and PostgreSQL, with an admin dashboard for license key generation and revocation, deployed live on Render.
- Independently discovered a production credential leak (database password and API secret committed to a public repo); immediately rotated the exposed credentials to neutralize the risk, then moved secrets into environment variables to prevent future exposure.

AIMealTracker — AI-Powered Nutrition Estimation App *React, Vite, JavaScript, Claude API*

- Built a React + Vite web app that sends free-text meal descriptions to the Claude API with structured prompts, returning real-time macronutrient estimates (protein, carbs, fats, calories).

Dental Clinic Voice AI Agent — Conversational Voice AI Demo *Voiceflow, Conversational AI, Prompt Engineering, LLMs*

- Built and configured a conversational Voice AI agent for dental clinics using Voiceflow, designing prompts, conversation flows, and agent behavior for handling real patient conversations.
- Configured the agent with clinic-specific information so it could answer questions about dental treatments, services, and common patient queries.
- Designed conversational flows for understanding patient requirements and collecting and qualifying potential leads.
- Tested the agent across different conversation scenarios and iterated on prompts and responses to make conversations more natural and useful.

VectorDB — Vector Database & RAG Engine *Python, Flask, HNSW, LLMs (Ollama)*

- Built a vector database from scratch in Python implementing HNSW, KD-Tree, and Brute-Force search algorithms, exposed via a Flask REST API and thoroughly tested for accuracy.
- Added a Retrieval-Augmented Generation (RAG) pipeline on top that retrieves relevant document chunks and generates grounded answers using a local LLM.

DPI Packet Analyzer — Network Traffic Classification System *Python, Computer Networks, Systems Programming*

- Built a Deep Packet Inspection tool in Python that parses network packet headers from .pcap captures and classifies traffic by application using TLS/HTTP data, with configurable IP/domain/port blocking rules.
- Architected the codebase as a modular, testable package and thoroughly tested it to catch and fix a domain-classification bug found during development.

EXPERIENCE

Front-End Developer Intern — Craftedge Academy **Oct 2025 – Apr 2026**

- Delivered responsive, cross-browser-compatible UI components for live client-facing pages by translating design mockups into production-ready HTML, CSS, and JavaScript, achieving successful QA sign-off across all target browsers and resolving identified cross-browser layout and styling issues.
- Shipped code changes into a live production codebase with zero introduced regressions by following Git-based version control and team code-review workflows to implement approved features.

EDUCATION

VIT Bhopal University **Expected 2027**

B.Tech, Computer Science Engineering (Artificial Intelligence & Machine Learning) | CGPA: 8.67

- Achievements: Learning DSA pattern-wise (Two Pointers, Sliding Window, Prefix Sum, Kadane's Algorithm) with consistent practice on LeetCode (leetcode.com/u/parth213g).
