SUMMARY

Final-year B.Tech CSE (AI/ML) student building full-stack products end to end. Shipped a TypeScript React Native and Express platform with JWT auth and sub-80ms API latency, a FastAPI and PostgreSQL booking service that blocks double-booking under concurrent requests, and live apps on Vercel and Render. Targeting Full-Stack Developer and SDE Intern roles.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript (ES6+), Python, SQL, C++
Frontend: React, React Native, Expo, Expo Router, Vite, Tailwind CSS, HTML5, CSS3, PWA, Responsive Design, Client-Side State Management
Backend & APIs: Node.js, Express.js, FastAPI (Python 3.12), REST APIs, JWT Authentication, Pydantic v2, Rate Limiting, Asynchronous Programming
Databases: PostgreSQL 16, Supabase, MySQL, Transactions, Row-Level Locking, Idempotency
DevOps & Tools: Docker, Docker Compose, Git, GitHub, pnpm Workspaces (Monorepo), Render, Vercel, Linux/Unix Shell
Testing: Pytest, Pytest-Asyncio (concurrency and integration tests)
AI Integration: Claude API, Groq API, Streaming Responses, RAG Prompt Grounding

EXPERIENCE

Software Engineering Intern (Front-End & Systems) | Craftedge Academy | Remote / Bhopal | Oct 2025 - Apr 2026

- Cut initial page load latency 28% on client-facing platforms with 1,000+ active learners. The fixes: React code-splitting, lazy-loading, and asset minification. Mobile layout shifts are gone too.
- Reduced redundant network requests 35%, with zero regressions across releases, by adding centralized client-side state and debounced REST queries.
- Shipped modular, responsive React components that passed 100% of QA verification.

PROJECTS

Insta Insights: License-Gated Analytics App | React Native, Expo Router, TypeScript, Node.js, Express, PostgreSQL (Supabase), Render | GitHub

- Held API response time under 80ms on a deployed mobile analytics platform. JWT guards the admin routes, REST endpoints are rate-limited, and the performance charts are custom react-native-svg.
- Gated paid access with a license-key engine: generate, validate, revoke, server-side expiry. It sits on normalized PostgreSQL schemas with connection pooling and ACID transaction boundaries.
- Linked the mobile client and Express backend in a pnpm-workspaces monorepo, so both share TypeScript types through project references.

Eve Diagnostic Booking Service | FastAPI (Python 3.12), PostgreSQL 16, Pydantic v2, Docker Compose, Pytest | GitHub

- Removed double-booking races under concurrent requests by reserving slots with pessimistic row locking (SELECT ... FOR UPDATE).
- Made duplicate payment-webhook retries harmless. An idempotency-key ledger and a transactional outbox mean no double charges and no duplicate bookings.
- Wrote async Pytest suites that simulate conflicting bookings. The API and database run in Docker Compose, and FastAPI generates the OpenAPI/Swagger docs.

AI Portfolio & Recruiter Assistant | React, Vite, FastAPI, Groq API | Live | GitHub

- Shipped a live macOS-style portfolio with draggable windows, a dock, and streamed AI answers. React frontend on Vercel, FastAPI backend on Render, slowapi limits of 20 req/min (chat) and 5 req/min (JD matcher).

VoiceCart: Voice Shopping List PWA | JavaScript, Web Speech API, Service Workers | GitHub

- Built an offline-first, zero-backend PWA that turns speech into shopping lists in English, Spanish, French, and Hinglish. It has a quantity and unit parser, three recommendation engines (reorder, seasonal, substitute), and LocalStorage persistence.

DPI Packet Analyzer | Python | GitHub

- Parsed raw .pcap files byte by byte (Ethernet, IPv4, TCP, UDP, TLS SNI, HTTP, DNS) and applied firewall rules. A 5-tuple flow table with LRU eviction keeps memory capped on multi-gigabyte captures.

EDUCATION

Vellore Institute of Technology (VIT Bhopal) | B.Tech, Computer Science and Engineering (AI/ML) | CGPA: 8.67 | Aug 2023 - May 2027

Coursework: Data Structures & Algorithms, Machine Learning, Deep Learning, NLP, DBMS, Operating Systems, Computer Networks

CERTIFICATIONS

- **CS50's Introduction to Artificial Intelligence with Python**, Harvard University (online) | Oct 2026 | Verify: 3e7e245a
- **Oracle Certified Foundations Associate, Agentic AI**, Oracle University | Sept 2026 | Verify: 103546830AAI26OFA
- **Applied Machine Learning in Python**, University of Michigan (Coursera) | Jan 2026 | Verify: G1Q6ZYPKPWP4

ACHIEVEMENTS

- Ranked top 3 in the district among 1,200+ students in a Mathematics Olympiad.
- Ranked top 5 among 7,000+ students in a Mathematics Olympiad.
- Solved 250+ algorithmic problems on LeetCode, GeeksforGeeks, and HackerRank (DP, graphs, trees, two pointers). Solutions: GitHub.
